Sprint Review 1

- Features implemented = This week we implemented the homepage features so that the user is able to open the website and see the Poppin logo, we also completed the tab feature so that the webpage tab reflects the Poppin site.

- Issues fixed = One big issue with Deliverable 0 was not hearing from our groupmate Brett Kinahan despite multiple attempts to contact him. We notified Professor Ghanavati and completed what we originally assigned to him. This week, we made adjustments to split the workload between 4 people instead of 5. We have reached out to Brett Kinahan to let him know that we are moving forward without him unless there has been a misunderstanding.

- Implementation review = The biggest part of getting started with implementation was getting the environment on Github and figuring out how to access it through VSCode. We helped each other figure it out during our meeting on Monday 2/12. We were all able to contribute to the repository, which will help us get started on development sooner next week.

- Changes made. = We changed our product backlog so that it matched our user stories document. This was our first Sprint, so we mostly set up a routine instead of changing one.

- Plans for next sprint = For our next sprint, we will focus on completing the code that displays all homepage features and allows a user to register. We have split the work so that Wesley and Emmanuelle will do the Use Case Models and Description, while Monica and Brett will do the Architecture Design and more developing since the document is weighted less.

- Scrum Review = Our product owner (Monica) managed the product backlog and approved of sprint progress. Our scrum master (Brett P) facilitated the development team's work by splitting the deliverable into roles and figuring out who wanted to do what. Our development team (Wesley & Emmanuelle) began to implement essential home page features as specified in our story goals. Meeting on Monday 2/12 and Friday 2/16 helped improve the communication for the team. We will begin to meet on the first Monday of the sprint (excluding holidays) to feel more prepared for the sprint.
